Abstract

Compliance Risk Management (CRM) is a *Decision Support System* used by the Directorate General of Taxes to manage taxpayers based on risk. This risk-based management is an appropriate strategy to provide services, supervision, and law enforcement more effectively and efficiently in accordance with the level of risk and compliance of the taxpayer concerned. CRM helps Taxpayer mapping based on relevant risk with the precision functions. After seeing the implementation of the CRM Billing Function by the bailiff, the CRM billing function in tax collection activities that helps the bailiff's performance and helps increase the realization of the disbursement of tax arrears at the Tax Office and the Regional Office of the Directorate General of Taxation. Descriptively, the explanation of CRM Billing Function implementation is also accompanied by supporting data in the form of the realization of tax receivable collection. Prior to the implementation of the Billing Function CRM, the bailiff compiled a list of billing priorities manually. CRM as a risk engine for taxation automation data for taxpayers helps tax bailiffs and tax audit officers see taxpayers with potential in terms of their ability to pay and their tendency to pay off their tax debts.
